Room Enclosures

Four Seasons Building Products is known for manufacturing some of the most efficient energy saving rooms. The room's walls and roof panels feature a highly dense material known as Expanded Polystyrene, or EPS, a material that's impervious to the effects of seasonal weather.

The room's windows are manufactured with low-e (low-emission) glass. Low-e glass has a microscopically thin, transparent coating – it is much thinner than a human hair – that reflects long-wave infrared energy (or heat). When the interior heat energy tries to escape to the colder outside during the winter, the low-e coating reflects the heat back to the inside, reducing the radiant heat loss through the glass. The reverse happens during the summer time.

Four Season Building Products' walls and windows are housed by heavy duty extruded aluminum coupled with thermal breaks. A resin based material is incorporated in the frames that block the exchange temperatures – keeping the heat of summer and the cold of winter outside.

Screen Enclosures

Four Seasons Building Products offers several different screen enclosure systems giving the homeowners numerous options to choose from.

Screen enclosures are economical and custom designed to meet any homeowner's needs.

The aluminum framing is wider than any other screen enclosure on the market. All screen enclosure manufacturers offer 2" x 2" extruded components for their screen rooms; however Four Seasons Building Products has raised the bar by offering extruded components that are 2" x 3". That's 33 percent more aluminum in the frame making it the most durable screen enclosure in the market.

Lattice Covers

Elitewood's™ unique metallic composition offers not just comfort, but complete peace of mind: little to no maintenance; total weather resistant; no cracking, warping, or splitting; no need for painting; fire resistant, termite resistant and unsurpassed durability that will preserve its beauty for years to come.

Four Seasons Building Products proudly presents the Elitewood™ Lattice Covers. Elitewood Lattice Covers are embossed with a rough hewn deep wood texture that resembles the natural appearance and beauty of real wood without the many problems associated with wood. Elitewood Lattice Covers feature design diversity and numerous optional extras. Create the perfect shade cover to enhance the beauty of your home and lifestyle.

Patio Covers

Four Seasons Building Products' insulated patio covers are manufactured using expanded polystyrene technology. This manufacturing process has been recognized by architects around the world for its superior insulating characteristics, and it gives you complete protection from nature's elements. The insulated core, housed by two heavy gauge aluminum layers, provides superior protection from the outdoor heat and reduces sound created by heavy rainfall.

A fashionable addition to the insulated patio covers is the Illumaview Natural Light System. The patented design interlocks seamlessly with the insulated panels. The polycarbonate materials used in these panels are impervious to discoloration or cracking, and they filter the sun's ultraviolet rays.

Four Seasons Building Products are committed to environmentally friendly products and sustainable business practices.
